

VOCALIS

Speech Reveals. Vocalis Confirms.

What Is Vocalis?

Vocalis is an **advanced voice analytics platform** that detects emotional and cognitive states—such as stress, uncertainty, and cognitive load—by analyzing the full spectrum of speech. Unlike traditional “voice stress analyzers,” Vocalis measures psychological risk, revealing hidden emotional responses that influence behaviour and decision-making.

How It Works

Vocalis analyzes hundreds of vocal biomarkers within milliseconds, identifying involuntary patterns of stress and cognitive strain.

- **Objective Risk** – Deviation from population norms
- **Subjective Risk** – Deviation from an individual’s own baseline

This dual-model approach reveals inner conflict or selective disclosure—accurately and ethically.

Scientifically Validated

Vocalis is grounded in psychophysiology, not micro-tremor theory. Research partnerships with leading institutions such as Tsukuba University, Oxford, and Duke University confirm biological and predictive validity across disciplines—from forensic investigations to clinical and HR applications.

Why Choose Vocalis

- ✓ Real-Time Insight: Detects emotional strain as it happens.
- ✓ Ethical & Non-Invasive: No sensors, no physical contact.
- ✓ Scientifically Proven: Built on decades of peer-reviewed research.
- ✓ Versatile Applications: Security, HR, Finance, Clinical Research, and beyond.

Transform How You Understand Speech.

Contact us and reveal what’s hidden, confirm what’s true, & elevate your insight with Vocalis.
